# HOW TO INVEST IN CRYPTOCURRENCIES FOR GENERATIONAL WEALTH

By Teeka Tiwari and Greg Wilson

---

## Welcome From Teeka Tiwari

Dear Subscriber,

I want to personally welcome you to *Palm Beach Crypto Income*.

Perhaps you're one of the thousands of readers I've helped make a fortune in the cryptocurrency market. Or maybe you're an investor eager to earn streams of big income from outside of Wall Street.

Either way, welcome aboard. I know you'll be thrilled with this unique service. You see, *Palm Beach Crypto Income* is a new way to make money from the burgeoning crypto market.

In this service, we don't just look for tokens that appreciate in value. We also find tokens that pay incredible yields in the form of "crypto rewards." (In the past, we've called them "Tech Royalties.") It's a lucrative way to invest in the crypto space.

By owning one, you could set yourself up for a lifetime of income.

My longtime readers know how much effort I've put into looking for the best crypto ideas out there.

I've traveled thousands of miles over the past few years. I've attended over 30 conferences and meet-ups in New York, Vancouver, Toronto, St. Kitts, London, Lisbon, Berlin, Copenhagen, Bogotá, Rome, Miami, and other cities.

I've also been to dozens of invitation-only private events. Some, I'm not even allowed to mention. That's how I came across this unique income idea.

99.99% of investors don't know about this opportunity. That's one reason why we decided to launch a service dedicated to this strategy in late 2018.

As we'll show you below, it's been very successful, proving the effectiveness of our idea.

Now, it's important you know this isn't day trading. We're buying and holding these ideas for income. So we're not trading in and out of positions. Our goal is to hold our positions for the next few exponential moves up while we collect outsized payouts.

And the best part is, not only can the cryptos we own appreciate in price... but the yields can increase, too.

With these coins, the size of your payout is tied to the growth and usage of the crypto. So the more people that use a project, the more it grows, and the more your yield does, as well.

As I write, there are around 22,925 cryptocurrencies available to invest in – with new ones coming online every week. Some are scams. Others are a complete waste of time. But a few are the real deal. It takes hundreds of man-hours and millions of dollars in resources to find the best.

To track these opportunities, I needed to bring on more support staff and analysts... And that's why I promoted my top crypto analyst, Greg Wilson.

Greg's been my right-hand man behind the scenes during our incredible run. He has a strong background in finance and technology... and he's brought some of our best crypto ideas to my attention.

Together, we've created a system that identifies the top projects in this space.

In this service, you'll learn all about these crypto income opportunities. We'll also give you step-by-step instructions to set yourself up for the chance to profit from them.

I strongly encourage you to read this entire guide. If you have any questions or suggestions about improving this service, please send them to us [here](#).

Welcome aboard, and Let the Game Come to You!

A handwritten signature in black ink that reads "Seth Singh". The signature is written in a cursive, flowing style with a long, sweeping underline.

# What Are Crypto Rewards?

By Greg Wilson

Most investors have never heard of crypto rewards... But they can lead to massive profits in the crypto world.

We can compare them to stock dividends.

Just like you can receive a dividend for owning a stock, you can receive automatic payouts for owning a crypto.

Now, stocks pay dividends quarterly or yearly so long as the board approves them. But since cryptocurrencies are computer code, there's zero uncertainty here. The "dividends" are programmed in.

So you can often collect your extra tokens daily, weekly, monthly, or even yearly... It's up to you.

However, there's a key difference between regular dividends and crypto income payouts. Traditional companies usually issue dividends as cash payments or shares of stock. Crypto income is paid in more crypto.

Let me give you an example...

Let's say you buy 1,000 tokens of a given crypto for \$1,000. That's \$1 per token. And let's say the crypto pays 8% a year in dividends. That means you get 80 extra tokens per year, or an extra \$80.

Now, let's say that token goes up 10 times.

Instead of getting an \$80 dividend (which is 8%), those 80 tokens are now worth \$10 each. That's \$800.

That means crypto dividends appreciate at the same rate as the token. So your \$1,000 initial investment goes up in value and is also paying you an \$800 dividend.

That's an effective dividend rate of 80%.

You can't get this type of opportunity in any other market...

Now, most people aren't familiar with these special crypto dividends.

But despite what you might think, you don't need to be a tech expert to benefit from most of these opportunities. In this manifesto, we'll show you everything you need to take advantage of them.

## Crypto Income in Action

When we first launched this service in late 2018, it was the first of its kind.

No other company identified this trend, let alone tried to build a service around it.

Our mission was to prove it could work. And that's exactly what we've done the last three years.

Let me give you a few examples of some of our biggest winners since we launched:

- **Crypto Income Opportunity No. 1: KuCoin (KCS)**

First recommended in December 2018, it yielded roughly 5%.

In 2021, we sold KuCoin for a price gain of 2,960%. And when you include our crypto income earned over that time, our total gain was 3,354%.

- **Crypto Income Opportunity No. 2: Synthetix (SNX)**

First recommended in December 2019, it yielded roughly 25% during our holding period.

Over 2021, we sold SNX in two tranches, locking in price gains of 698%. And when you include our crypto income earned over that time, our total gain was 1,088%.

- **Crypto Income Opportunity No. 3: Ethereum (ETH)**

First recommended in March 2020, it yielded roughly 5%.

Today, ETH is up over 2,284%. And the yield, based on our original cost, is now over 76%.

(Keep in mind, prices change daily. You can check the *Crypto Income* portfolio page [here](#) for the latest numbers.)

This is the power of crypto income. *Palm Beach Crypto Income* readers are well on their way to generating streams of big income from outside of Wall Street.

Let's review the strategies you'll be using to generate big income streams, too.

## Crypto Income Strategies

In *Crypto Income*, we look for crypto projects that pay steady income or some type of regular reward. That means we make money no matter what the market is doing.

Many of these opportunities are new. And some may take a little more time and effort to set up.

But our team has years of experience helping people profit from the crypto market. We'll provide you with step-by-step instructions to take advantage of them.

Below is a list of the types of crypto reward programs we'll look for...

## **Staking**

The two main ways people obtain cryptocurrencies are by either buying them from an exchange or mining them using expensive computer hardware.

But most people don't realize you can generate even more income from the crypto you already own through a process called "staking."

Without getting too technical, staking is using your ownership to participate in the network. You'll hear the process referred to as Proof-of-Stake, or PoS.

In other words, you deposit your coins in a blockchain wallet or application.

By staking your coins in that blockchain wallet or application, you become a participant in the network.

And as a participant in the network, you'll get an opportunity to receive a crypto reward – like a "dividend."

It may be for helping to validate transactions. Or participating in governance. Or delegating to other participants in the network. Whatever the case, we'll show you everything you need to know.

Think of staking like depositing your money in a bank. Instead, you're depositing your tokens in a digital wallet. In a deposit account, you collect interest on your money. In a crypto wallet, you collect additional tokens.

In the case of staking, your "interest" is based on the amount of crypto you hold in your wallet, the length of time you hold it (maturity period), and the compound interest (whether you reinvest your tokens like you reinvest dividends in a stock).

Best of all, with staking, you can generate new coins without buying the expensive equipment needed to constantly mine them.

Today, staking is our primary opportunity. (To learn more about the process of staking, you can check out our FAQ [here](#).)

Over the past couple years, blockchains have increasingly turned to PoS as the consensus mechanism for their blockchains. (A consensus mechanism is how a blockchain agrees on the state of the network.) That's because PoS offers a number of benefits:

- Improved scalability

- More efficient security
- Aligns economic incentives among stakeholders
- Encourages wider participation
- More energy-efficient than Proof-of-Work (PoW)

PoS blockchains are now a \$331 billion industry.

Many of the leading blockchains today, such as Ethereum, Binance Chain, Polygon, Polkadot, Avalanche, and Cardano are PoS networks. The industry is projected to pay out an estimated \$25 billion in rewards in the next year alone (based on token prices at time of writing).

We think this is just the start.

First, the crypto industry is much different than just a couple years ago. We've gone from the conceptual stage to real-world applications.

Second, crypto is now a legitimate investment class.

Third, staking provides superior yield potential. Even with the recent stock sell-off, the dividend yield on the S&P 500 remains below its long-term average. And even though the 10-year Treasury rate is off its lows, it's not keeping pace with record-high inflation.

The soundness of fiat money continues to be questioned. Investors are seeking yield outside of traditional finance.

And finally, the infrastructure for large inflows into staking projects is in place. There are many companies that now enable institutions to participate in these types of crypto income opportunities – for a fee, of course.

## **Services**

Blockchain technology is constantly innovating. So new crypto income opportunities are constantly emerging. The “services” category is a catch-all for opportunities that fall outside of our other crypto income-generating strategies.

One area creating new income opportunities is DeFi, or decentralized finance. DeFi a catch-all term for financial services and products on the blockchain.

DeFi activities such as lending, borrowing, or token-swapping rely on smart contracts – pieces of self-executing codes – to execute transactions. But there needs to be liquidity as well, referred to as liquidity pools.

Liquidity pools are an innovation of the crypto industry, with no immediate equivalent in traditional finance. What they do is supply the liquidity needed to enable others to perform DeFi transactions. Those that provide liquidity are called Liquidity Providers (LPs) and earn a portion of the fees for doing so.

A good example is the decentralized exchange Uniswap. A crypto user can, for example, use Uniswap to easily swap USDC for DAI. Behind that trade, however, are LPs that supplied USDC and DAI to the pool to facilitate the activity.

For investors, providing liquidity can generate income. Protocols incentivize liquidity providers through fees and in some cases token rewards as well.

In addition to trading and swaps, providing liquidity is used in DeFi for lending and borrowing, saving, bridging crypto assets, and a range of other activities.

You generally won't need to buy a new crypto to participate in these opportunities, however, we may supply stablecoins such as USDC and DAI.

## Airdrops

An airdrop is when a crypto project distributes its tokens for free to existing holders of its tokens or another eligible cryptocurrency. So if you own one coin and meet certain conditions, you'll automatically receive the other for free.

Airdrops happen for several reasons...

In some cases, you'll receive an airdrop when a cryptocurrency forks (splits or spins off). Some projects use airdrops for marketing purposes or to increase awareness of the token. And others hold airdrops to reward early supporters and investors.

One recent example is Cosmos (ATOM). This portfolio holding is a decentralized network of independent, scalable, and interoperable blockchains.

And new protocols join its network all the time. One example is Osmosis (OSMO), a decentralized exchange.

Its application enables users to provide liquidity and swap tokens from across the Cosmos ecosystem. And it plans to connect to other chains in the future.

As part of the launch, in August 2021, Osmosis began airdropping OSMO tokens to ATOM stakers.

This airdrop shows the incredible potential of crypto rewards like the ones we cover at *Crypto Income*.

In the initial distribution, ATOM stakers received OSMO for taking specific actions such as connecting Osmosis to the Keplr wallet and making a swap. So receiving the OSMO airdrop was like a "special dividend" for ATOM stakers.

Our goal in *Palm Beach Crypto Income* is to take advantage of any airdrops that come our way – and earn additional crypto for free.

## The FIRE System

There's no shortage of opportunities to generate income from cryptocurrencies. But some are too difficult for non-tech experts to set up... and others may be too risky.

That's why we put each opportunity through our FIRE System. This system evaluates each idea through four criteria:

**Future Potential:** We use our proprietary system to gauge the price appreciation of a potential crypto. Then, we look at its potential for mainstream adoption. For instance, we check to see whether a token is listed (or will be listed) on a major exchange like Coinbase. We also investigate whether major financial firms such as TD Ameritrade or Fidelity will trade the token in the future.

**Income:** Income is a simple analysis of how the crypto reward works. The amount of income you can generate varies with each idea. Some projects can return between 4% and 250%. We also give you instructions on how to collect the payout.

**Risk:** Crypto is a volatile, high-risk, high-reward market. But the beauty here is that it offers the opportunity for asymmetric trades. That means you only have to risk small amounts to make potential life-changing gains. You can learn more about our risk-management strategy in the Risk Management section below.

**Effort:** This is how much effort and time you'll need to set up your crypto reward program. Some opportunities require just a few minutes to set up. Others may require occasional participation. And some require dedicated effort. We'll let you know what to expect with each opportunity.

We evaluate each special crypto reward project through our FIRE System and rate each as Low, Medium, or High. Generally, we look for higher future potential and higher income, with lower risk and lower effort. Of course, each opportunity will differ. Some ideas may require a higher effort to participate, but the returns will be much higher, too.

In the table on the next page, you can see how our FIRE System works using GRT as an example.

<b>Crypto Income FIRE System: The Graph</b>			
<b>Criteria</b>		<b>Comments</b>	<b>Rank</b>
<b>F</b>	<b>Future Potential</b>	The Graph provides a critical piece of infrastructure for Web3. It's solving the problem of accessing blockchain data and being able to do so in a decentralized manner. With The Graph you can access blockchain data without having to run a full blockchain node or use a centralized service. Further, data is the foundation on which AI is built and operated on, so easy access to a large amount of high-quality data is crucial. For blockchain data, AI will leverage The Graph.	<b>High</b>
<b>I</b>	<b>Income</b>	By staking GRT, we can earn a yield between 10% and 15%.	<b>High</b>
<b>R</b>	<b>Risk</b>	The Graph engaged several auditing companies to increase confidence in the security of the network. Audits were completed by OpenZeppelin, Trail of Bits, and Consensys Diligence. The audits found no critically severe issues, and The Graph continues to work with auditors to address any bugs.	<b>Medium</b>
<b>E</b>	<b>Effort</b>	To stake GRT you'll need to deposit your tokens on the Arbitrum network, connect to The Graph Network, and delegate your tokens. Rewards automatically accrue to your stake.	<b>Medium</b>

## Risk Management

We run our *Crypto Income* portfolio like a venture capital fund. That means we spread our investments over several opportunities.

That's because cryptocurrencies are asymmetric bets. In other words, the upside potential is multiples larger than the downside. For every \$1 you invest, you can make \$10 or more in return. But your downside is contained at \$1.

By spreading our risk across multiple opportunities, we could lose many battles, but still win the war.

For example, let's say you invested \$100 across 10 opportunities, each paying 8%. That's a total of \$1,000 yielding \$80 a year. Now, let's say nine of those opportunities go to \$0, but one rises 10,000%.

In this scenario, you would have "lost" \$900. But you would have turned one of your \$100 investments into \$10,000. Not only that, but you'd also be collecting \$800 a year in "dividends"... recouping almost all of the money you lost in the other nine opportunities.

Of course, that's an extreme example... We plan on our FIRE System being much more successful than that.

Our risk-management strategy is twofold:

- 1. Invest like a venture capital fund.** In *Crypto Income*, we spread our risk across multiple opportunities. That means we only have to score on a few investments to secure potentially life-changing income. We expect to invest in over two dozen ideas. To make the most of this service, we suggest you participate in at least 10 of them.
- 2. Keep small position sizes.** We recommend your total exposure to cryptocurrencies be no more than 5–10% of your liquid net wealth. Of that, we advise individual position sizes of \$200–500 for small traders and \$500–1,000 for larger traders.

Here's a good rule of thumb: If the amount you invest in a position causes you to lose sleep or worry too much, you've invested too much. **Remember: Never risk more than you'd be willing to lose because crypto investing is very volatile.**

By using small and uniform position-sizing, we stack the odds greatly in our favor. We only need a few of these asymmetric bets to be winners to secure life-changing income.

It also ensures that one loss doesn't wipe out your entire crypto portfolio.

## What You Get With Your Service

Being a subscriber of *Crypto Income* is like participating in an elite venture capital fund. Here's what you get with your service...

- **Monthly Reports:** Each month, we publish a new report, usually with one or several crypto income opportunities. We also provide updates on our portfolio positions and insights into the most important happenings in the crypto space.
- **Updates:** When we need to take urgent action on a crypto, we'll send you an email detailing the action to take.
- **Instructional Guides:** Our [Crypto Corner](#) features in-depth video guides that can help you get started in crypto if you're brand-new to the space. And once you've become comfortable with the crypto markets, head over to our Resources page [here](#) to find step-by-step instructions on how to set up each crypto reward opportunity in our portfolio.
- **Model Portfolio:** We track the performance of each opportunity in our model portfolio.
- **Support Team:** We have an entire support team to help you with any questions about your subscription you have along the way.

You can find all these helpful tools through the *Crypto Income* home page [here](#).

## Conclusion

Teeka here again.

I couldn't be prouder of what we've done with *Palm Beach Crypto Income*.

Myself, Greg, and my entire support team are here for you every step of the way. Your success is our success.

If you have any questions, you can reach our customer service team [right here](#).

Let the Game Come to You!
